

Cygnus

Mass : 95 tons

Chassis : Type BMH-7 Endo Steel

Power Plant : GM 380 XL

Cruising Speed : - kph

Maximum Speed : 64 kph

Jumps Jets : -

Jump Capacity : - m

Armor : Forged Type HH34 Standard

Equipment :

2x Ultra Autocannon/10s

4x Medium Pulse Lasers

Manufacturer : Transitional Facility HH-Beta

Primary Manufacture : WC, Site 1

Communications System : CH6 Series Integrated

Targetting & Tracking System : -

Description :

After Clan Hell's Horses invaded Clan Wolf's Inner Sphere territory, the Horses needed to rebuild from the losses they incurred. A surprising partnership with Clan Wolf-in-Exile led to the Cygnus, which entered service in 3075. Based on the Annihilator, the simple design of the Cygnus allows for fewer things to go wrong without losing its lethality. It is a BattleMech, rather than an OmniMech, the decision of a desperate Clan that needed to rebuild as quickly as possible.

The Cygnus is swift for a 'Mech of its size, as its 380 engine makes it capable of 64 km/h, though that comes at an increased vulnerability due to the bulk of the XL Engine. An Endo Steel chassis also saves weight.
